

# Review

**{ EPITECH. }**

Sign up for this project and its oral presentation to review a project you have recently done. There is no specific restriction on the project you want to review.

You can not review all projects, so select the one you want to present.

Whenever possible, register for the **reviews** as a complete project group. If some members are not available (especially because they would like to present another project), you can register as an incomplete group, or on your own.

## ORAL PRESENTATION

---

In a few minutes, you have to

- talk about your project, from a technical and organizational point of view,
- present your bonuses,
- defend your architectural or algorithmic choices,
- justify any non-compliance with the Coding Style,
- answer questions.

Captivate your audience and be eloquent!

It is important to present the relevant aspects of your project, which sets you apart from other groups. Also, you will be required to present your organization, your methodology, your test policy,...

If you have bonuses, it is imperative to present them.

Take care of your slides, your communication, your general presentation and your use of space,...

Be professional, or pretend you are!

During oral presentations session, be ready with your presentation at any time so as not to waste time regarding other participants.

Be attentive to presentations from other groups, they will be helpful, and you may have some relevant remarks to make.
