

B1- Unix System Programmation

B-PSU-100

Bootstrap

my_sokoban

v1.3

my_popup

Bootstrap my_sokoban

binary name: my_popup
repository name: PSU_my_popup_\$ACADEMICYEAR
repository rights: ramassage-tek
language: C
group size: 1
compilation: via Makefile, including re, clean and fclean rules

- Your repository must contain the totality of your source files, but no useless files (binary, temp files, obj files,...).
- All the bonus files (including a potential specific Makefile) should be in a directory named *bonus*.
- Error messages have to be written on the error output, and the program should then exit with the 84 error code (0 if there is no error).

Your binary must be built with the **ncurses** library.

Write a program called **my_popup**, which takes a character string as parameter and displays it in the very middle of the terminal (in both height and width).

The program will exit by erasing the screen as soon as the user presses the space bar.

Only the project authorized functions are allowed here.
